

Smoke / exploratory results. Positive drop = target logit decreases; negative = increases.
Dots are images, random repeats averaged within image. Controls do not match position or foreground.

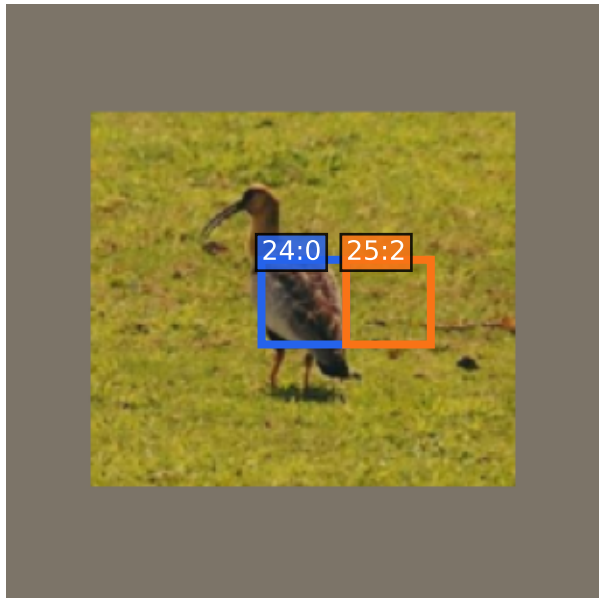

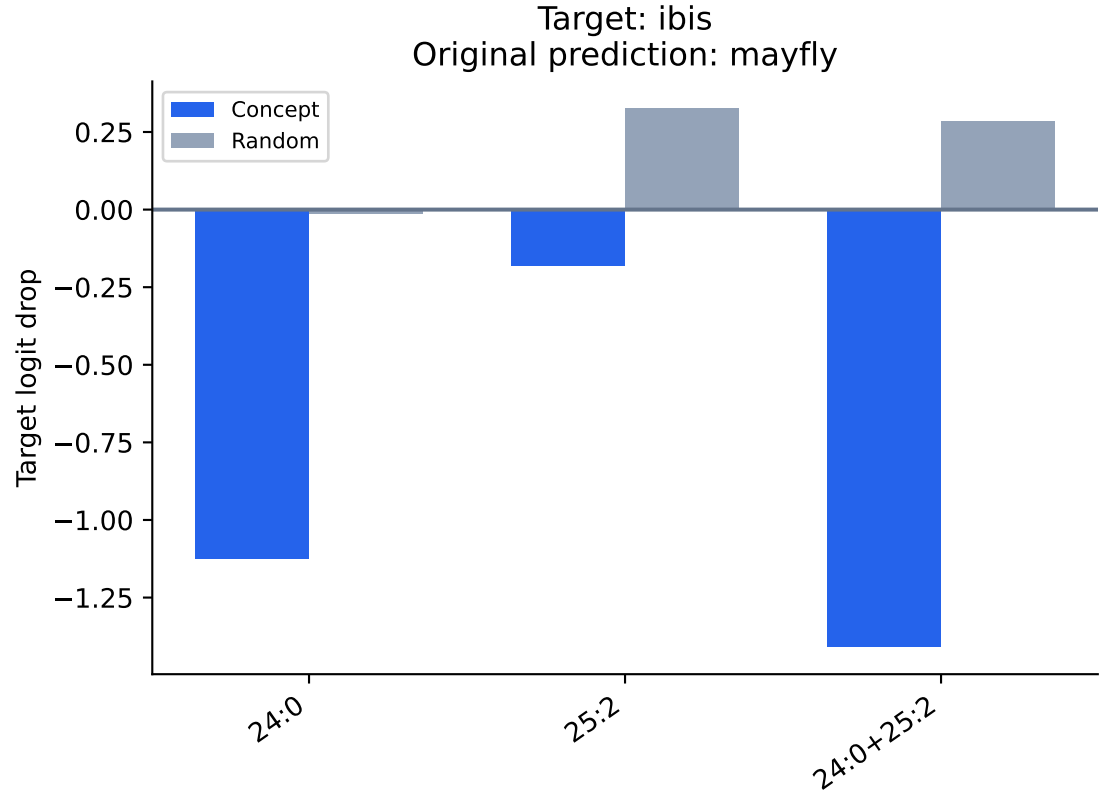

Smoke / exploratory results. Positive drop = target logit decreases; negative = increases.
Dots are images, random repeats averaged within image. Controls do not match position or foreground.

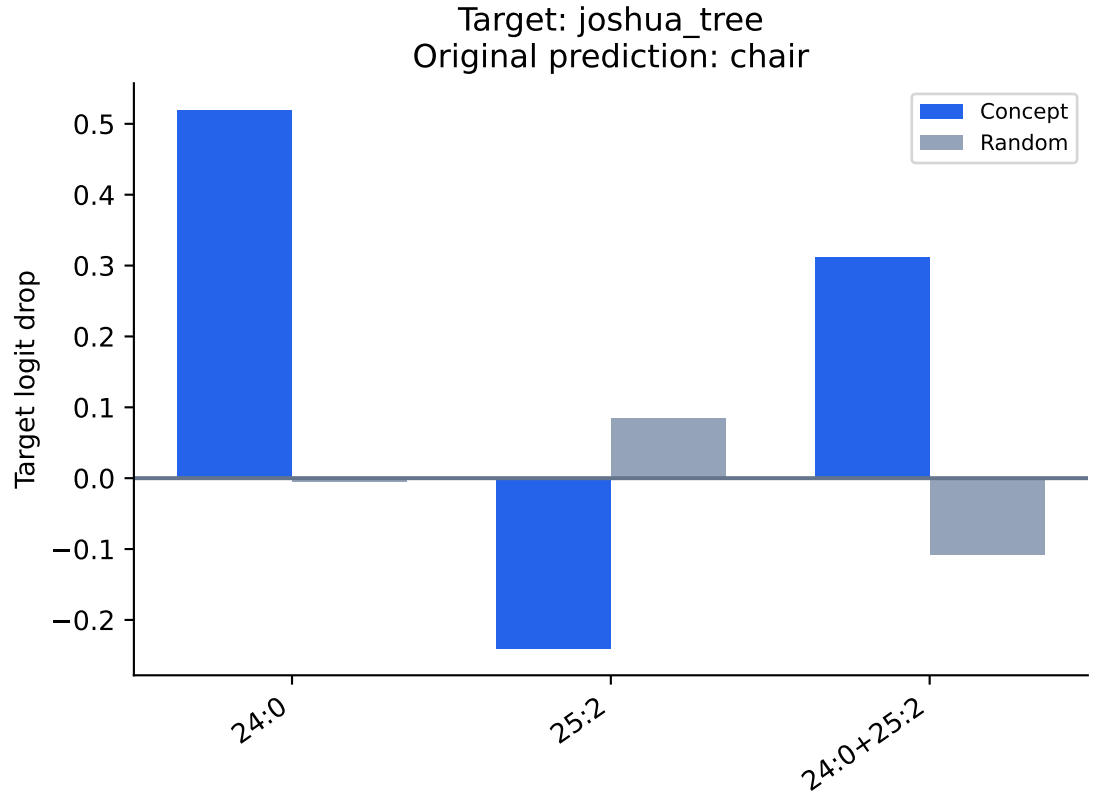

Same images and fixed target for A, B and A+B. Non-additivity alone does not establish a causal mechanism.

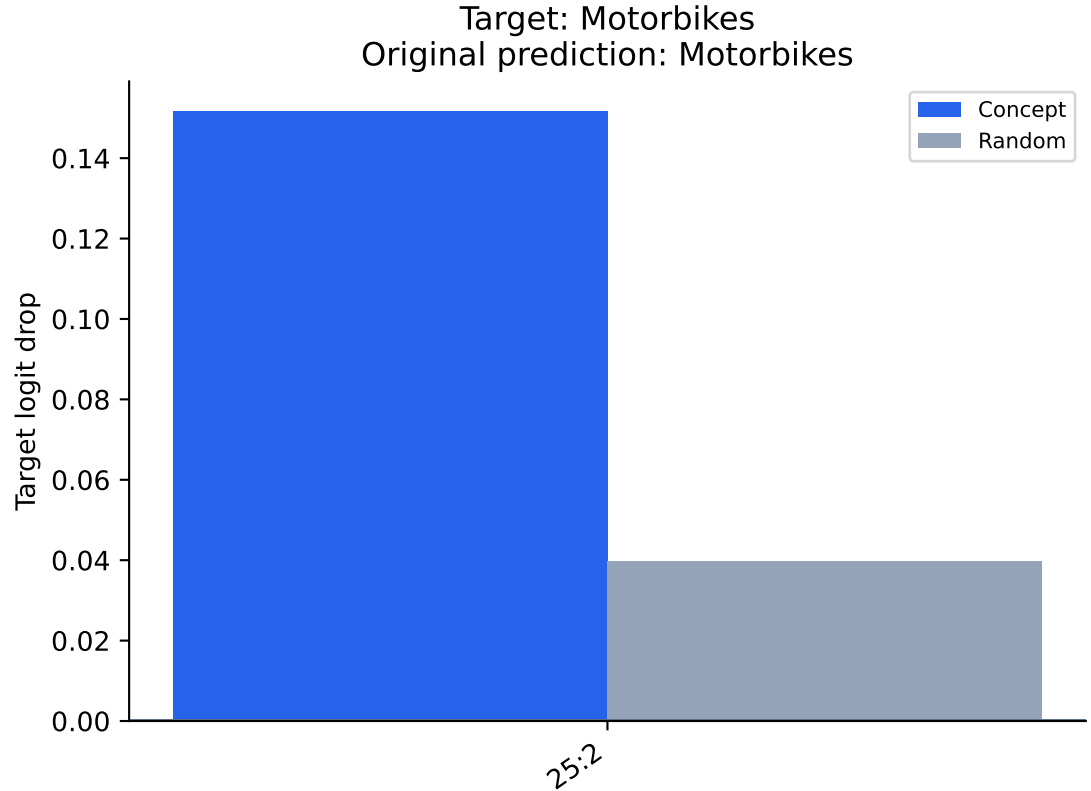

Boxes mark token grid cells, not full attention receptive fields. Replacement: mean.
Highlighted group: 24:0+25:2; bars include all evaluated groups present in this image.

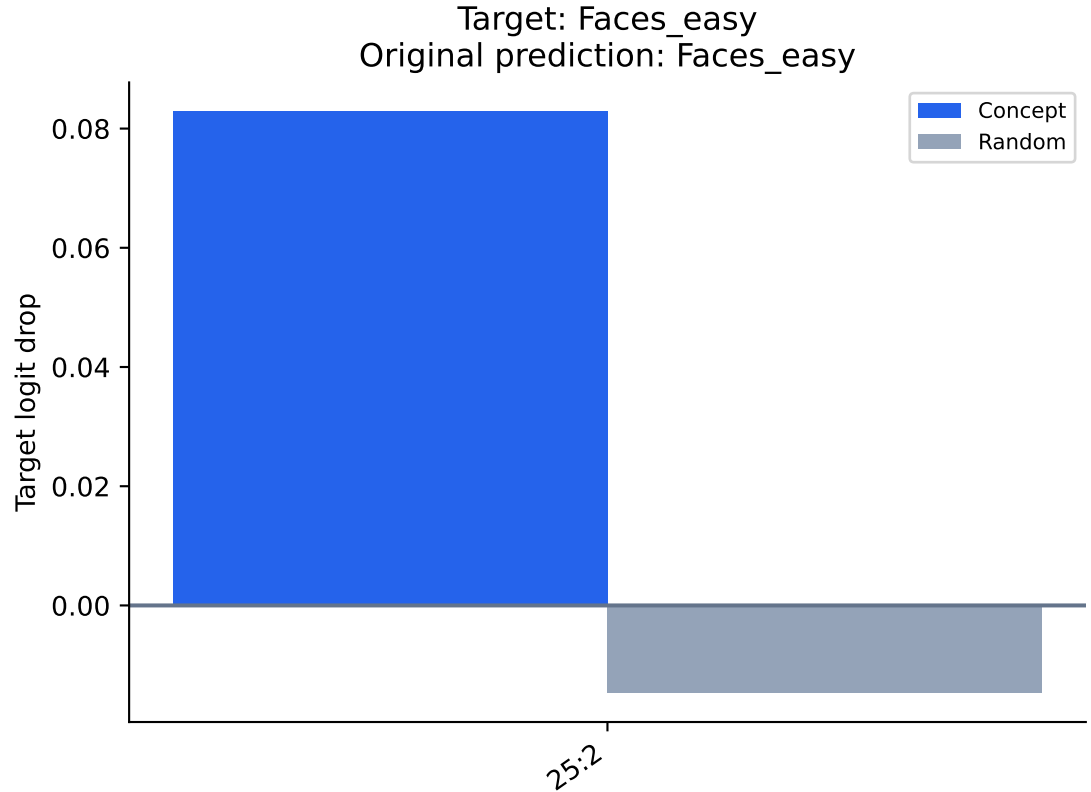

Boxes mark token grid cells, not full attention receptive fields. Replacement: mean.
Highlighted group: 24:0; bars include all evaluated groups present in this image.

Boxes mark token grid cells, not full attention receptive fields. Replacement: mean.
Highlighted group: 25:2; bars include all evaluated groups present in this image.

Boxes mark token grid cells, not full attention receptive fields. Replacement: mean.
